

Composite Veneers Offer Superior Results

The straightening of crooked teeth was traditionally treated by using fixed braces or orthodontics. Today many adults find this option angst-inducing, and time consuming. Individuals are now often choosing veneers or “instant orthodontics” to resolve their smile issues.

Composite veneers are becoming the material of choice in today’s aesthetically-demanding and health-conscious market. These veneers feature less tooth reduction and brilliant aesthetics that rival or surpass that of porcelain veneers at a fraction of the cost. Composites offer a conservative, natural looking-superior solution, while simultaneously changing tooth size, colour and shape. Unlike the traditional two appointment method for porcelain veneers, composite veneers can often transform your smile in one dental appointment. Advances in composite technology have created materials with such stunning depth and range of colour, value, hue and lifelike translucency that in the hands of a composite master is indistinguishable from nature.

Interesting Fact: Even porcelain veneers are applied using the strength of composite bonding material!

“A smile is the window to the soul,” goes the old adage. Common denominators such as symmetry, aesthetics and even proportion are some of the essential ingredients in a beautiful smile. Many of us are not born with a perfect smile, but it is important to retain our inherent subtle differences that give us our individuality.

Budget and health-conscious consumers are making more conservative, practical and informed choices in healthcare. Composite bonding allows long-term individual aesthetics at around half the price of porcelain veneers with less sacrifice to your existing teeth.

Composite Bonding is truly a magical product in the hands of an experienced cosmetic artist. At Aevitas you will find two extremely knowledgeable practitioners of composites, Dr. Dylan Yung, BDS (Otago) and Dr. Clarence Tam, HBSc, DDS (Canada)

Both Dylan and Clarence offer **free consultations** for you to discuss any concerns you may have with your smile. Call or email us to arrange a time suitable for you.

Many other smile transformations are viewable on the Aevitas website.
